Welcome to Industrial and Systems Engineering at Rutgers!

The department of Industrial and Systems Engineering at Rutgers is committed to providing the highest quality education for our students. We are committed to research, often in collaboration with industry and other disciplines, to advance the state of knowledge and practice in our field. Both our teaching and research are firmly rooted in scientific principles, and at the same time incorporate in-depth knowledge of problem areas including manufacturing and production systems, quality and reliability engineering, and systems engineering. Our objective is to solve complex, relevant engineering problems facing industry and the public sector today and in the future.

In a time of rapidly changing technology, industrial and systems engineers are needed to design cost-effective, efficient systems that can integrate complex technologies into manufacturing, service, and government enterprises. Industrial and Systems Engineers apply mathematical and economic analysis, engineering sciences, and information technology to design, control, and improve supply chain systems, quality control and monitoring systems, health care delivery systems, biological systems, transportation and port operations, security systems, and automated manufacturing systems. We analyze the reliability of electronic components and systems, the safety performance of airlines, and the performance of computer systems. The graduate programs in industrial and systems engineering at Rutgers provide students with a strong technical background and prepare them for leadership careers in this exciting and challenging profession.

This handbook is for prospective and current students. It contains information about admission and financial support and the detailed requirements for the MS and Ph.D. degrees. This document can be found on the web at www.ise.rutgers.edu. For graduate applications go to <http://gradstudy.rutgers.edu>.

We encourage prospective students to learn more about our program and we welcome new and current students to a productive 2014-2015 academic year.

Please feel free to contact us with your questions.

Professor, Mohsen Jafari, Department Chair
Associate Professor, Melike Baykal-Gürsoy, Graduate Director (gursoy@rci.rutgers.edu)

1. Introduction to Degree Programs in Industrial and Systems Engineering

This handbook contains information about the graduate program in Industrial and Systems Engineering (ISE) at Rutgers. Here you will find admission requirements and descriptions of our degree programs and options.

The ISE Graduate Program offers both MS and Ph.D. degrees. For the MS degree there are three options: Industrial and Systems Engineering, Quality and Reliability Engineering, and Production and Manufacturing Systems Engineering. The MS degree requires either 30 credits of course work or 24 credits of course work and 6 credits of thesis research. The Ph.D. degree requires 48 credits of course work beyond the BS degree and 24 credits of dissertation research. In later sections, the courses, laboratories, and program requirements are described in detail.

There are four main research areas for the graduate program: production/manufacturing systems, quality/reliability engineering, systems engineering including simulation, logistics and aviation safety, and information technology. The faculty and graduate students are active in research in these areas with publications in leading Industrial and Systems Engineering journals. The research has been supported by agencies including the National Science Foundation, the Department of Defense, the Federal Aviation Administration, and private industry. The department focuses on applied research in engineering.

The department offers well-equipped laboratories that are available to the graduate students. These include: the Computer Integrated Manufacturing Lab, the Quality and Reliability Lab, the Facilities and Layout Lab, the Microcomputer Lab, the Microprocessor and Manufacturing Information Technology Lab.

The Industrial and Systems Engineering department has twelve full-time faculty members. In addition, graduate students collaborate with faculty in other graduate programs including Statistics, Mechanical Engineering, Mathematics, Operations Research, Civil and Environmental Engineering, and Management Science.

Currently there are approximately 80 students in the program, 46 in the MS program and 34 in the Ph.D. program. Twenty percent are US students; 80 percent are studying full-time. Many graduate courses are offered in the evening making it possible to complete a master's degree program while working full time.

We offer full or partial financial support to many of the graduate students in the form of teaching assistantships, research assistantships, and fellowships. In general, Ph.D. students who have completed their MS degrees are given priority; however students who are in earlier stages of their studies may also be considered for financial support.

The matriculation and course requirements enumerated in the Graduate Handbook at the time of your enrollment are the basic requirements you must fulfill in order to complete your requirements for a degree in ISE. Whenever there are modifications in curriculum and requirements, students entering before the modifications have been made will be eligible to choose the new curricular option should they wish to do so. All students must indicate in writing to Ms. Cindy Ielmini, which curricular option they are choosing to

pursue.

If you have any questions please contact Dr. Baykal-Gursoy (gursoy@rci.rutgers.edu).

2. Admission Criteria

Admission to the graduate program depends on performance in undergraduate studies, GRE scores, recommendations, and evidence of research potential. Below we provide some guidelines to help you decide if you wish to apply. We emphasize that the following numbers are only guidelines for admission to the graduate program.

- BS GPA (minimum): 3.0/4.0 for engineers (In India, first class); 3.2/4.0 for others
- MS GPA (minimum): 3.5/4.0 for Ph.D. applicants
- GRE scores (average): Verbal 159; Quantitative 159; Analytical Writing 3.5
- TOEFL for International students (minimum): 557/220/writing 22, speaking 23, reading 21, listening 17. Also we accept IELTS and the minimum score is band 7.

Below you will find a list of the required prerequisite undergraduate courses. The courses are described in detail in Section 14 of this handbook.

- Four semesters of calculus including differential equations and linear algebra
- High level computer language (C++ for example)
- A basic course in Linear Optimization – could be a course in Operations Research (equivalent to Rutgers ISE course 540:311 or math course 640:453 or 711:453)
- Probability - calculus based (equivalent to Rutgers ISE course 540:210)
- Engineering Economics (equivalent to Rutgers ISE course 540:343)

If you are missing one or more of the prerequisite courses you may be admitted to the graduate program conditionally; that is, you are accepted with the requirement that you take the prerequisites within the first year and receive a grade of B or better. If these conditions are not satisfied you may be dropped from the program. Part-time students are given additional time.

If you have not taken the calculus-based course in probability you must take 960:580 (or 960:582) and you will receive credit. However, MS students in the Manufacturing Systems option will be permitted to take 960:379 for credit.

If you have not taken Deterministic Methods or Operations Research, you may take 540:311 or 640:453 or 711:453 for NO credit.

If you have not taken Engineering Economics, you could either take 540:343 Engineering Economics for NO credit or take Adv. Eng. Eco 540:575 for credit.

Sometimes it is difficult for the admissions committee to judge the content of a course from its title on the transcript. If you believe you have studied material in a course that is an admission condition, discuss it with the Graduate Director. Prepare yourself with a catalog description or course outline to show that you have already studied the required material.

3. Academic Integrity

As an academic community dedicated to the creation, dissemination, and application of knowledge, Rutgers University is committed to fostering an intellectual and ethical environment based on the principles of academic integrity. All graduate students have a responsibility to understand and to uphold the standards of academic integrity in their academic work including course work, MS dissertation and Ph.D. thesis.

The principles of academic integrity require that:

- All work submitted in a course or related academic activity must be a student's own and must have been produced without the aid of unsanctioned materials or collaboration.
- All use of the ideas, results, or words of others including faculty members, classmates and friends, must be properly acknowledged and cited.
- All contributors to a given piece of work from others including faculty members, classmates and friends, must be acknowledged properly.
- All data or results must be obtained by ethical means and reported accurately without suppressing any results inconsistent with the author's interpretation or conclusions.

The full Policy on Academic Integrity may be found at <http://academicintegrity.rutgers.edu>.

4. Financial Support

The department currently supports about thirty graduate students with fellowships, teaching assistantships, and graduate research assistantships. The support includes a stipend of approximately \$20,000 plus tuition. Other students receive partial support or are paid hourly to participate in research projects.

Graduate research assistants and teaching assistants are required to work for fifteen hours per week on the projects or courses to which they are assigned.

In funding new students, doctoral students receive first priority for support. Almost all offers of funding for new students go to doctoral students who have already completed their MS degrees. Some MS students receive full or partial funding after they have joined the program. This funding may be hourly payment for research assistance or a limited term appointment as a teaching assistant or graduate research assistant. There are also many job opportunities on campus – assisting in research projects on an hourly basis, conducting recitations in calculus, and so on. It is unlikely that an international MS applicant will be offered financial support before joining the program.

When the admissions committee accepts a student, he or she is notified by letter and is placed on the list of students eligible for financial support. In March, offers for fellowships are sent out. Financial support is highly competitive. The typical recipient has qualifications that far exceed the minimum admission requirements. In particular, the recipients show clear evidence of research potential, for example, detailed recommendations from a research advisor or a prize in recognition of excellent research. Fellowships, teaching assistantships, and or graduate research assistantships are provided

to deserving Ph.D. students for a limited time only not exceeding 4 years except in rare cases 5 years.

5. MS Degree Requirements

Credits: The MS degree requires a minimum of 30 credits. Depending on the MS option that a student chooses, either 18 or 21 credits must be taken from the ISE department at Rutgers – these courses begin with the number 540. MS students in the thesis option may not take independent study course Special Problems 540:550 for degree credit.

Seminar: Each student must register three semesters for the ISE seminar (540:691 or 692), a zero credit course. In the ISE seminar, speakers from industry and academia present their latest research. The seminar course is pass/fail.

Non -Thesis Option: MS students in the non-thesis option must write a research report and make a presentation at a public seminar on an ISE topic. Graduate students and at least two faculty members will attend the presentation.

Each student will identify a faculty member as his or her supervisor who will approve the topic. Possible topics include work that was done individually for a class project, an extension of class material, or review and synthesis of several journal articles.

The presentation will be 20 minutes long. Arrange the date with the Graduate Director well in advance. The report must be approximately 20 pages, double-spaced, 12-font. The format will be typical of scientific papers: abstract, introduction, two or three sections of a body, conclusions, references, and appendices if necessary. The final report must be approved by at least three members of the Graduate Faculty. If the presentation and report is not accepted, the student will be required to make revisions.

Thesis: Students may elect to write an MS thesis in place of six credits of coursework. The thesis is a closely supervised project of original research. The principles of academic integrity should be adhered to in preparation of the MS thesis. Most of our master's theses have been published in leading ISE journals. The administrative steps for students who write an MS thesis follow:

MS thesis proposal:

- ✓ By the end of the first year identify an advisor.
- ✓ Select a committee of at least three members of the ISE program.
- ✓ Set the date with the committee, reserve the conference room, and provide an abstract to the graduate secretary to distribute to faculty and graduate students. Submit proposal form electronically to the Graduate Director.
- ✓ Distribute the written proposal at least one week in advance to committee members.
- ✓ Give a formal 30-minute presentation on your proposal.

MS thesis defense:

- ✓ Prepare the Admission to Candidacy Form for the MS degree, which can be obtained from the ISE office.
- ✓ Fill in all your courses and submit it to the ISE office for verification.

- ✓ Set the date with the committee, reserve the conference room, and provide an abstract to the graduate secretary to distribute to faculty and graduate students. Submit defense form electronically to the Graduate Director.
- ✓ Distribute the written proposal at least ten days in advance to committee members.
- ✓ Give a formal one-hour presentation on your thesis.

MS Options: The ISE program offers three MS options:

- Industrial and Systems Engineering
- Manufacturing Systems Engineering
- Quality and Reliability Engineering

The options vary in the proportion of required and elective courses. The advisor must approve all elective courses. Students who have taken a required course to fulfill undergraduate requirements may substitute an additional elective in place of the required course. The student does not retake it in graduate school but selects an additional elective such that the total number of graduate credits is 30.

The MS options are summarized in the following table and then described below.

Requirement	ISE	Mfg	Quality
Total credits	30	30	30
Minimum ISE credits	21	18	18
Seminar 3 semesters	Yes	Yes	Yes
Thesis option	Yes	by arrangement	Yes
Required courses	15 credits	12 credits	21 credits

Summary of MS Requirements -ISE and two options

5.1 Industrial and Systems Engineering

The Industrial and Systems Engineering is the most flexible option allowing students the opportunity to select electives focusing on their areas of interest. The required courses provide a firm foundation in mathematical modeling, simulation, and production systems. The option requires 30 credits with at least 21 credits from the ISE department at Rutgers – these courses begin with the number 540.

Required courses:

- 540:510 Deterministic Models in Industrial Engineering
- 540:515 Stochastic Models in Industrial Engineering
- 540:555 Simulation of Production Systems
- 540:560 Production Analysis
- 960:590 Design of Experiments

5.2 Production and Manufacturing Systems Engineering

The Production and Manufacturing Systems Engineering option offers students a rich specialty in production systems, simulation, supply chain engineering, automation and manufacturing. This option requires 30 credits of course work. Students take 4 required courses, six technical electives. At least 18 credits must be taken from the ISE program at Rutgers.

Required Courses:

540:520	Supply Chain Engineering
540:555	Simulation of Production Systems
540:560	Production Analysis
540:573	Advanced Manufacturing Processes

Recommended Technical Electives:

540:510	Deterministic Models in Industrial Engineering
540:530	Forecasting and Time Series Analysis
540:552	Production and Manufacturing Project
540:565	Facilities Planning and Design
540:570	Applications of Robotics in Mfg. Systems
540:572	Manufacturing Processes and Control
540:568	Automation and Computer Integrated Manufacturing I
540:575	Advanced Engineering Economics
540:650	Discrete Event Dynamic Systems
540:655	Performance Analyses of Manufacturing Systems
540:660	Inventory Control
540:665	Theory of Scheduling
540:668	Automation and Computer Integrated Manufacturing II
540:673	Laser Based Micro-Manufacturing
540:675	Advanced Engineering Economics II
540:682	Process Modeling and Control
960:540	Statistical Quality Control
960:590	Design of Experiments
22:799:607	Supply Chain Management Strategies
22:799:608	Procurement Management and Global Sourcing
22:799:659	Supply Chain Solutions with ERP/SAP I
22:799:669	Supply Chain Risk Management

Students who have taken a required course to fulfill requirements may substitute an additional elective in place of the required course such that the total number of graduate credits is at least 30.

5.3 Quality and Reliability Engineering

The Quality and Reliability option, offered in cooperation with the Statistics department, prepares students with a specialty focusing on design of experiments, process control, reliability, and quality management.

The Quality and Reliability Engineering option requires 30 credits with at least 18 from the ISE department at Rutgers – these courses begin with the number 540. Following are the required courses:

Industrial and Systems Engineering:

540:560	Production Analysis
540:580	Quality Management
540:585	Systems Reliability Engineering I

540:685	Systems Reliability Engineering II
Statistics	
960:540	Statistical Quality Control I
960:542	Life Data Analysis
960:590	Design of Experiments

Prerequisite Override – Statistics courses: To register for a course in the Statistics Department (course number is 960:xxx) the ISE graduate director can give you a prerequisite override form which you must use to register in person.

6. Ph.D. Degree Requirements

The program offers a Ph.D. degree in Industrial and Systems Engineering. Students complete the following requirements to graduate: course requirements, the written qualifying examination, the thesis proposal, and the dissertation defense. Details of these steps are summarized in the following table and then discussed below.

A student with an MS degree in Industrial Engineering or a closely related field takes the qualifying examination after the first year of study. The total period of study is approximately 4 years. Students with backgrounds other than Industrial Engineering and students who have only a BS degree upon entering the program may take longer.

Requirement	Ph.D. after BS	Ph.D. after MS
Total credits	72	54+18 transferred
Research credits	24	24
Course credits	48	30
Seminar all semesters	Yes	Yes
Minimum ISE credits	30	21
600 Level ISE credits	12	12
Dissertation	Yes	Yes
Qualifying Exam	Yes	Yes
Thesis Proposal	Yes	Yes
Required courses	DOE	DOE
Elective courses	advisor approval	advisor approval

Summary of Ph.D. Requirements

6.1 Course Requirements

A Ph.D. student entering with a BS degree takes 48 credits of course work and 24 credits of Ph.D. dissertation research. Of these 48 course credits, 30 must be in the ISE department at Rutgers.

A student entering the program with an MS from another university may transfer up to 18 credits (for appropriate courses with approval of the Graduate Director). The student takes at least another 30 credits of course work at Rutgers with at least 21 credits in the ISE department at Rutgers – these courses begin with the number 540. The procedure for transferring credits is given in Section 6.

Students are required to take the following courses:

- At least four ISE courses at the 600 level. In certain cases, one 600 level course from other departments in the School of Engineering, Management Information Systems (OR Program), or Statistics may be counted towards this requirement.
- Design of Experiments (960:590)
- Mathematics Fundamentals in Industrial Engineering (642:593)

All students are required to take the mathematics course 642:593. The mathematics course is only offered in alternate years, i.e., 2014, 2016, etc.

All doctoral students are required to register for and attend Seminar every semester. This is a zero-credit course that meets approximately six times per semester for one hour featuring speakers from industry and academia.

6.2 The Qualifying Examination

The comprehensive exam tests students on their knowledge of the four core courses in Industrial and Systems Engineering, i.e.,

540:510	Deterministic Models in Industrial Engineering
540:515	Stochastic Models in Industrial Engineering
540:560	Production Analysis
540:585	Systems Reliability Engineering I

Doctoral students take at least two sections of the qualifying exam after completing one year of course work and complete all sections after completing two years of course work. The students who arrive in Spring will be required to take at least two sections of the qualifying exam in the Fall of the next year, and to complete all sections after completing two and a half years of course work.

The exam is given the September of the fall semester. Students are asked to sign up to take the exam approximately one month in advance. Each part is an open book exam that is 3 hours long. Students are required to respond to all questions.

The exams focus on the topics covered in the courses. The questions, however, test the depth of your knowledge. It is not necessary to worry about obscure details. However, it is necessary to know in depth the material from the courses.

A committee of professors is assigned to compose and proctor each exam. The graduate committee that is chaired by the Graduate Director determines the final results. Students are notified about the results within two weeks of the exam at the latest.

If a student fails one or more sections of the exam, the graduate committee may recommend that the student repeat those sections. If a student fails several sections and shows a serious lack of comprehension, the graduate committee may recommend that a student withdraw from the program. Students may only repeat a section one time. No exceptions.

6.3 The Dissertation Proposal

This is an oral examination that focuses on the student's dissertation proposal. The student will be questioned on the proposed research and knowledge relating to the research area.

Here is a checklist of items in preparation for the dissertation proposal:

- ✓ Select a committee of at least four members. At least three must be members of the ISE program and at least one must be an outside member, i.e., a qualified person in industry or academia outside the ISE graduate program.
- ✓ Set the date with the committee, reserve the conference room, and provide an abstract to the graduate secretary to distribute to faculty and graduate students. Submit the proposal form electronically to the Graduate Director.
- ✓ Distribute the written proposal at least two weeks in advance to committee members.
- ✓ Prepare the Admission to Candidacy Form, which can be obtained from the ISE office.
- ✓ The presentation should be approximately one hour long. The committee approves the proposal by signing the Candidacy Form at the conclusion of the proposal presentation.
- ✓ Hand deliver the candidacy form signed by your committee to the Graduate School, 25 Bishop Place, New Brunswick.

After the proposal is approved the student becomes a Ph.D. Candidate.

6.4 Dissertation Defense

The Ph.D. dissertation is expected to be an original and significant contribution to the field of Industrial and Systems Engineering. The principles of academic integrity should be adhered to in preparation of the Ph.D. dissertation. Upon completion of the dissertation, the student defends it at an open oral examination. Successful performance at the oral examination is the last requirement of the Ph.D. degree.

Here are some items that must be taken care of by the student before the dissertation defense.

- ✓ Set the date with the committee, reserve the conference room, and provide an abstract to the graduate secretary to distribute to faculty and graduate students. Submit the defense form electronically to the Graduate Director.
- ✓ Distribute the written dissertation at least two weeks in advance to committee members.
- ✓ Obtain your Admission to Candidacy Form from the Graduate School and complete the form. Your committee members sign this form to approve the dissertation.
- ✓ Defend your dissertation. The presentation should be approximately one hour long.
- ✓ Submit your dissertation to the Graduate School carefully checking that you have followed the prescribed format.

7. Transfer of Credits

Up to nine credits of course work may be transferred from another school towards an MS degree with the approval of the Graduate Director. Up to 18 credits of course work may be transferred towards the Ph.D. degree. Students may arrange the transfer after they have accumulated 12 credits at Rutgers. The form for transfer of credit is available in the ISE Office and on-line from the Graduate School-New Brunswick.

8. Faculty Advisors

For MS or Ph.D. students involved in thesis research, your advisor is the faculty member guiding your research. For all other students, such as first year students and MS students not participating in thesis research, the Graduate Director serves as advisor.

Identifying a research advisor is one of the most critical responsibilities of a student who intends to get involved in research. The first step is to find out the research areas of the faculty. A brief description appears in this handbook. You are encouraged to make appointments with faculty members and ask them about their research. If a seminar, article, or course particularly interests you, speak to faculty in that area of research. The relationship between a student and advisor is based on trust and honesty. It will be difficult to change your advisor once you have identified a faculty member who has agreed to advise you. Thus, it is very important to give serious consideration to this process before making your decision.

After a general area has been identified and a faculty member has agreed to advise you, please inform the Graduate Director. You should identify an advisor and a general research area before the end of the first year at Rutgers. In rare cases that you may need to find another advisor, you need to get the approval of the ISE Graduate Committee to this change. At that point, ISE Graduate Committee will be convened to review your progress in the department. Please be advised that teaching assistantships, graduate assistantships, and fellowships are provided to deserving students for a limited time only not exceeding 4 years starting from the time of their enrollment at Rutgers University.

The Graduate Committee reviews students' progress annually.

9. Registration

New Students Must Meet With Graduate Director: As soon as you arrive on campus – the week before classes begin is convenient for many students – please call the ISE department and arrange a meeting with the Graduate Director to select your courses. This meeting is an opportunity for new students to discuss prerequisite courses that have been required for admission. If you feel that the requirement is unnecessary, bring a catalog description or course outline to show that you have already studied the required material. Students must obtain waivers for prerequisite courses in the first semester.

Web Registration: All students, including new students, may register on the web. Registration is in mid-March for the Fall Term and Summer Session and in early October

for the Spring Term for continuing students. It is your job to be aware of registration deadlines.

Registering in Person: Sometimes it is necessary to register in person because a deadline has been missed or you must present a prerequisite override form or there is some other complication. The Registrar is located in the Administrative Services Building (ASB), 65 Davidson Street, rooms 202 A, B, F, L.

Cashier's Office: It is possible to pay on-line. However, to do so in person, go to Records Hall, 620 George Street, on the College Avenue Campus. The office is open from 8:30 to 5pm.

Identification Card (RU Express Cards): You may obtain a Rutgers identification card College Avenue Campus, Knight Express/Board Plan Office, 102 Records Hall, 620 George Street, New Brunswick, 848-932-8041; Busch Campus Housing Office, 581 Taylor Road, 848-445-0044; Cook/Douglass Housing Office, PAL Building, 848-932-9625, or Livingston Housing Office, Lynton Tower North, 848-445-2346.

Definition of Full-time Student: For loan, housing, and visa purposes 9 credits is considered full-time for all Rutgers graduate students. Students taking 9 or more credits will be charged full-time student fees. The credit charge will remain as in the past: students pay per credit up to 12 credits and pay the amount equal to 12 credits when registered for 12 or more credits. Graduate and Teaching Assistants usually carry 9 credits of course work.

Maximum Credits: The maximum that the Graduate School allows is 16 credits, which includes TA and GA credits but not fellowship credits.

Minimum Credits: Ph.D. candidates who have finished their required research credits but are still working on their dissertation must register for 1 credit of research each semester. MS students who are working on a thesis and have already completed the required 6 research credits may register for matriculation continued.

Matriculation Continued: This is for students who are taking a leave of absence from school for any reason. Do not just disappear from school. If you will be absent from campus for a semester, register for Matriculation Continued 540:800 or you will be automatically dropped from school and readmission will be required. You may register for 540:800 for only two consecutive semesters.

Research Credits: If you are participating in research be sure to register for research credits. This includes students in the early stages that are identifying topics and reading with a professor and students who have already taken the minimum required number of research credits but are still working on their dissertations. You may register for the number of credits that your advisor approves.

TA, GA and Fellow Credits: All TA's, GA's, and Fellows must register their appointments each semester for the appropriate number of credits. Students who are awarded a full assistantship or fellowship should register for 6 credits per semester, while those who receive a one-half appointment should register for 3 credits. For fellows, the

credits don't count toward the 16 credit maximum; for GA and TAs, the credits do count. Students are not charged for these credits.

Course Numbering System: The Graduate School code is 16. The code for ISE is 540. Other codes often used: 14 is undergraduate Engineering; 01 is undergraduate Arts and Sciences.

Special Permission Numbers: To register for a course outside the graduate school (school 16) the student must obtain a special permission number from the department that offers the course. For example, if a student wants to take a course in the Business school or in the Undergraduate School of Engineering, a special permission number is needed from the relevant department.

Prerequisite Override – Statistics courses: To register for a 960:540 Statistical Quality Control I, 960:542 Life Data Analysis, or 960:590 Design of Experiments or any Statistics course, the ISE graduate director can give you a prerequisite override form which you must use to register in person.

Undergraduate Courses for CREDIT: A maximum of 9 credits at the 300 and 400 level may be applied towards a graduate degree. Put "G" in the Credit Hour Prefix box to indicate "graduate credit." Graduate students need a special permission number to register for undergraduate courses (including ISE undergraduate courses).

Undergraduate Courses for NO CREDIT: Some new students are required to take undergraduate prerequisite courses for no credit. Graduate students need special permission numbers to register for undergraduate courses (including ISE undergraduate courses). If you are taking the course for no credit put "N" in the credit hour prefix box to indicate no credit.

Undergraduate Course Periods: Undergraduate courses mostly meet during the day. The time periods are as follows for the Busch campus.

Period	1	2	3	4	5	6	7
Starts	8:40 AM	10:20 AM	12:00 noon	1:40 PM	3:20 PM	5:00 PM	6:40 PM
Ends	10:00	11:40	1:20	3:00	4:40	6:20	8:00

Class periods - standard start and end times

ISE Seminar: ISE Seminar has course number 540:691 in the Fall and 540:692 in the Spring. All MS students must register for the seminar for three semesters. All Ph.D. students must register for the seminar every semester. The number of credits is 0.

Schedule of Classes: The Rutgers website for scheduling is kept up-to-date and is an excellent source of scheduling information: <http://www.acs.rutgers.edu/soc>. Each semester the ISE office will distribute a list of courses available for the following semester.

Courses Offered Every Year: The schedule of courses changes from year to year, however there are some constants. Every Fall we offer Deterministic Models in ISE (510), Manufacturing Project (552), Quality Management (580), Systems Reliability Engineering I (585), and ISE Seminar (691). Every Spring we offer Stochastic Models

in ISE (515), Manufacturing Project (552), Simulation of Production Systems (555), Production Analysis (560), Reliability II (685) and ISE Seminar (692).

10. Filing for Graduation

In order to graduate there are two forms that must be completed: (1) Admission to Candidacy, which checks that you have completed all requirements; and (2) Graduate Diploma Application, which is used to prepare the actual diploma. Degrees are awarded in January, May and October. The deadline for filing the candidacy admission form is announced each semester. It is usually the third day in January, May, and October, respectively. Try to get it in early.

Admission to Candidacy for MS students: Early in the semester in which you plan to graduate obtain a form from the ISE office entitled Admission to Candidacy for the MS degree. Fill it out, including all your courses. Submit it to Ms. Cindy Ielmini in the ISE Office, who will check it for accuracy and obtain faculty signatures. Then hand carry it to the Graduate School where it is checked again. If there are no problems you are put on the list of graduates.

Admission to Candidacy for Ph.D. students: Before your dissertation defense obtain your Admission to Candidacy for the Ph.D. degree form from the Graduate School where you filed it at the time you passed your thesis proposal. Complete the form including all your courses. Submit it to Ms. Cindy Ielmini, in the ISE Office, who will check it for accuracy. Bring it to your defense. When your thesis is approved your committee will sign it. Then you must hand carry it to the Graduate School where it is checked again. If there are no problems you are put on the list of graduates.

Graduate Diploma Application for All: This form is obtained ONLINE ONLY from <http://registrar.rutgers.edu>. The deadlines are normally January 2, April 1 and October 1. If you do not graduate at the planned time, you must file this form again.

Checklist: In preparing candidacy forms here are the items to check. Your transcript and candidacy form must show that you have

- ✓ the required number of credits
- ✓ the required number of credits that begin 540:xxx
- ✓ specific required courses
- ✓ three semesters of Seminar
- ✓ prerequisite courses or waivers from the Graduate Director

11. Academic Performance

Grades less than B. Course work performance of graduate students is evaluated at the end of every semester (including summer). A grade less than B is not considered acceptable in the graduate program. A student who receives a passing grade below B will receive a warning letter. A student who receives a failing grade or a second grade below B will be put on academic probation. If a student on probation receives a grade below B, a committee of the graduate faculty may vote to recommend dismissal from the program

due to unacceptable academic performance. These rules apply to all courses including graduate and undergraduate courses taken for credit or for no credit.

Minimum GPA. The minimum GPA is 3.0. A student with GPA below 3.0 will be put on academic probation. If a student on probation does not improve in the following semester, a committee of the graduate faculty may vote to recommend dismissal from the program due to unacceptable academic performance. These rules apply to all courses including graduate and undergraduate courses taken for credit or for no credit.

Research Progress. A Graduate Faculty meeting is held after each semester to discuss the progress of each Ph.D. student. Your research advisor will give you feedback every semester in writing. This form is filed permanently. If a student is having difficulty, the faculty will recommend a course of action to improve the situation. Evidence of progress in research is necessary to remain in the program and is necessary for continued funding.

Seven-Year Rule. Ph.D. students are expected to complete within seven years. The norm is 5 years for full-time students. The Graduate School will identify a doctoral student who will be enrolled for seven years and notify the student and the program. The student must file a request for extension, which includes statements by the students committee, the graduate program director, and the student explaining and justifying the request. The request must include an estimate of the completion date. The ISE program must decide whether to recommend the extension. Rejection of the request means that procedures to dismiss the student from the program must be initiated.

Incompletes. A grade of incomplete may be assigned if the instructor believes a time extension is justified. For graduate courses, you have 2 semesters to complete the course. If you don't complete within the 2 semesters, an incomplete remains on your record. You can apply for an extension signed by the graduate director and the professor.

For undergraduate courses (either for no credit or for credit) you have 2 semesters to complete the course. After the deadline, the incomplete automatically turns into an F.

12. Policies for CPT, OPT and reduced credit

Curricular Practical Training (CPT)

1. CPT is practical training related to the ISE curriculum. It is NOT for internships or part-time employment or full-time employment unless it is associated with a specific curriculum requirement with a course number.

2. PhD students and MS-thesis students (with a designated adviser from the ISE graduate faculty) must have approval of an advisor to apply for CPT. For these students, CPT can be associated with research credits or course credits. The CPT form must be submitted to the ISE Graduate Director by the student's advisor, who must be aware of the answers to all questions.

3. Non-thesis MS students can only apply for CPT if the practical training is required or associated with a particular ISE course listed in the catalog. A student cannot register for the class 'Special Topics in ISE' (16:540:550) unless an ISE faculty member has agreed

to supervise the course and gives approval for the CPT. One course credit worth CPT will be approved at most two times.

4. A graduate student must be in good standing (GPA above 3.3) to apply for CPT. CPT will not be approved during the semesters that the student is a fellow or a teaching assistant.

5. No CPT forms can be submitted or considered if there have been unsatisfactory grades (U) or incomplete grades or 'no-grades assigned' for previous course work associated with CPT.

6. Graduate Director will discuss CPT with any student only if a specific meeting has been scheduled in advance.

Occupational Practical Training (OPT) and reduced credit

1. OPT and reduced credit forms are to be initially submitted to the ISE Graduate Administrative Assistant. On a separate sheet of paper you need to supply notes corresponding to all questions and required information.

2. After reviewing the information on the form, the ISE Graduate Director will contact the student and arrange a meeting to discuss the application and sign it (if it has been approved).

13. General Information

Departmental Office: The Industrial and Systems Engineering Department office is located on the second floor of the CORE Building (Room 201). The office has copies of most forms. Office hours are 8:30-4:30 PM, Monday through Friday and the office is closed for lunch between 12:00 - 1:00 PM.

Photocopying: Graduate students can copy material in each of the libraries on the Busch campus and in the SERC classroom building. Materials required by TAs in their instructional duties can be copied through the department office.

Mailboxes: Full-time students have a mailbox in Room 201. Check your mailbox regularly for both messages and mail.

Electronic Mail: All Rutgers students may obtain a computer account on the Eden machine in order to send and receive email. Go to the Micrographic Center in the basement of the Hill Center, Room 17, and the counselor there will show you how to create your account. The phone number is 445-2296 and they are open 10-6 PM Monday through Saturday. Please send your address to Professor Baykal-Gürsoy (gursoy@rci) and to Ms. Cindy Ielmini (ielmini@rci). We will send you notices and announcements via email.

Employment Opportunities: Job announcements are posted on the bulletin boards and distributed via email. Students are encouraged to make use of the Career Development and Placement Office on Busch campus.

Graduate Student Offices: We have two locations for graduate student desks. These are assigned with the following priorities: teaching assistants, graduate research assistants, fellowship students, other Ph.D. students, and other MS students. In the past year we have been able to accommodate all students who wanted a desk. Desks are reassigned each semester.

Telephones: There is a telephone in the graduate student office, room 104, in the CoRE building. The phone number is (848)-445-3602. This phone and most of the telephones in research and instructional laboratories cannot be used to dial outside the university.

Tuition Remission for Summer Session for TAs, GAs, and Fellows: Those with calendar year (not academic year) appointments receive full tuition remission during the summer. For GAs the advisor's grant is the source of funding.

Health Insurance: If a student is registered for 12 or more credits, health insurance is included in student fees. If a student is registered for less than 12 credits then insurance may be purchased for approximately \$100. In addition students can purchase Major Medical Insurance by going to any Student Health Center. Full appointment TAs and GAs receive university employee health insurance. Fellows and partial appointment TAs and GAs do not.

New International Students: On arrival, go to the International Center, 180 College Ave and bring your passport and visa documents. The Center holds orientation programs in the week before classes begin. There are free workshops and a weeklong orientation that includes several workshops, trips, and social activities with a charge of about \$45. During orientation you can obtain a Social Security card on campus. At other times you can go to the US government office, 52 Charles St., New Brunswick. You will receive a receipt, which suffices until you receive your card in approximately 2-3 weeks.

New Students: No later than the week before classes, plan to arrive at Rutgers. Call the Graduate Director, Prof. Baykal-Gürsoy, room 218 to schedule a meeting. You will plan courses for the coming year and fill out your course request form. If you have questions about prerequisite requirements, bring appropriate documentation to show you have covered the required course material. Plan on spending 45 minutes.

TAs, GAs, & Fellows - Payroll Information: Meet with the ISE Administrative Assistant, Ms. Helen Pirrello, room 201. Bring your appointment letter and sign the attached waiver accepting the conditions of the position. If you didn't receive this letter and waiver in advance, you will receive it when you visit the ISE department. It is critical that you bring your social security receipt or card.

TAs, GAs, & Fellows - Tuition Remission Card, the RT100: At the time you submit your payroll forms to the ISE office you will be given a tuition remission card, the RT100, that is used to pay for your tuition. GAs and Fellows will get it signed in the ISE office. TAs must go to the School of Engineering, Room B114, and the accountant will sign it. Take the signed card with you when you go to the cashier to register for your classes.

14. ISE Faculty and Staff Directory

The telephone number for the Industrial and Systems Engineering department is (848) 445-3654 and the fax number is (848) 445-5467. The area code and prefix is (848) 445 for all telephones – the extensions are given below.

15. The Faculty

Susan Albin is Professor in Industrial and Systems Engineering. Her areas of research are quality engineering, process monitoring, data mining and stochastic modeling. Her work has been applied in areas including medical device manufacturing, semiconductor manufacturing, food processing, advanced display technology, and plastics recycling. Prof. Albin's research has been supported by NSF, FAA, DOD, the Council for Solid Waste Solutions, and industrial partners. Prof. Albin received her D.Eng.Sc in Operations Research from Columbia University and her MS and BS in Industrial Engineering from NYU. Prof. Albin was the 2010 President of INFORMS and the founding Chair of the Advisory Council of the INFORMS section on Quality, Statistics, and Reliability. Prof. Albin is the Editor-in-Chief of *IIE Transactions*. She has served as graduate director, was a visiting professor at Peninsula Technikon in South Africa, and has been a keynote speaker at conferences in China and Brazil. She is the recipient of the Excellence in

Teaching Award, Rutgers School of Engineering and the Exxon Education Foundation Award. She is a Fellow of IIE, the Institute of Industrial Engineers.

Melike Baykal-Gürsoy is an Associate Professor and Graduate Director, in the department of Industrial and Systems Engineering at Rutgers University. She received her BS in Electrical Engineering and her MS in Electrical Engineering majoring in Control Theory from Bogazici University, Istanbul, Turkey. She received her doctorate in Systems Engineering from the University of Pennsylvania, Philadelphia. Her specific fields of interest include stochastic modeling, queueing, Markov decision processes, stochastic games, and their applications to networks, transportation and supply chain systems. Dr. Baykal-Gürsoy's research activities are in the areas of modeling, optimization and control of stochastic systems, such as transportation, telecommunication and supply chain networks. She is developing new models that realistically represent complex phenomena such as congestion; traffic flow interrupted by random incidents; or retailer's behavior when selling substitutable products. She is developing optimization algorithms for adjustment of inventories in supply chains, for incident response and resource allocation in incident and emergency management, for dynamic traffic flow management under incidents, and for stochastic games. Dr. Baykal-Gürsoy is currently focusing on the analysis and mitigation of congestion; on infrastructure security; and on finding optimal pricing and inventory control policies for retailers operating under uncertainty. Dr. Baykal-Gürsoy teaches courses in optimization, stochastic processes, queueing theory, inventory control, supply chains and logistics, process modeling and control, and time series analysis. Her research and teaching have been supported through grants from NSF, United Nations, DOD, Rutgers Transportation Coordinating Council/Federal Transit Administration, Rutgers University Center for Disaster Preparedness and Emergency Response, and Rutgers Academic Excellence Fund. She is a member of INFORMS, and is listed in Who's Who in America. Dr. Baykal-Gürsoy has received the 2008-2009 Rutgers Engineering Governing Council Excellence in Teaching Award in I&SE.

Professor **Thomas Boucher** received his BS in Electrical Engineering from the University of Rhode Island, an MBA from Northwestern University, and an MS and Ph.D. in Industrial Engineering from Columbia University. His teaching and research interests include engineering economics, manufacturing automation, and production planning and control. His research has been sponsored by NSF, the Defense Logistics Agency, the Robert Wood Johnson Foundation and industry. He is the author of "Computer Automation in Manufacturing," (Chapman-Hall, 1996) and co-author of "Analysis and Control of Production Systems," (Prentice-Hall, 1994) and "Design of Industrial Information Systems," (Elsevier, 2006). The latter book won the 2007 Book-of-the-Year Award from the Institute of Industrial Engineers. He is a four-time winner of the Eugene L. Grant Award for his journal articles in *The Engineering Economist* and he is the 2002 recipient of the Wellington Award for outstanding contributions in the field of engineering economics. Dr. Boucher has served as a department editor for *The Engineering Economist* and *IIE Transactions*. He is currently Area Editor, Public Policy Analysis for *The Engineering Economist* and is an editorial board member of the *International Journal of Industrial and Systems Engineering*. He is a senior member of IIE, SME, and IEEE and is listed in Who's Who in Science and Engineering and Who's Who in America.

Professor **David W. Coit** received his BS in Mechanical Engineering from Cornell University, an MBA from Rensselaer Polytechnic Institute, and MS and PhD degrees in Industrial Engineering from the University of Pittsburgh. His research interests are in the areas of reliability, optimization and energy systems modeling. In 1999, he was awarded a CAREER grant from the NSF to develop reliability optimization strategies that consider reliability estimation uncertainty. Previously, he worked for twelve years at IIT Research Institute (IITRI), Rome, NY, where he was a reliability engineer and project manager, and then later, the Manager of Engineering at IITRI's Assurance Technology Center. He is a member of IIE, INFORMS.

Dr. **Elsayed A. Elsayed** is a Professor II in the Department of Industrial and Systems Engineering at Rutgers University. He is also the Director of the NSF / Industry / University Co-operative Research Center for Quality and Reliability Engineering. His research interests are in the areas of quality and reliability engineering and production planning and control. He is a co-author of "Quality Engineering in Production Systems," McGraw Hill Book Company, 1989. He is the author of "Reliability Engineering," Addison-Wesley, 1996 and its second edition published in 2012 by John Wiley and Sons. These two books received the 1990 and 1997 IIE Joint Publishers Book-of-the-Year Award respectively. He is also the co-author of "Analysis and Control of Production Systems," Prentice-Hall, 2nd Edition, 1994. He is the author and co-author of work published in the IIE Transactions, IEEE Transactions, Naval Research Logistics, Technometrics and the International Journal of Production Research. His research has been funded by DoD, FAA, NSF, ONR, Honda Research Institute and industry. He was the Editor-in-Chief of the IIE Transactions and the Editor of the IIE Transactions on Quality and Reliability Engineering. He is also an Editor for the International Journal of Reliability, Quality and Safety Engineering. He serves on the editorial boards of other journals such as International Journal of Production Research, Journal of the Korean Institute of Industrial Engineers, International Journal on Quality Technology and Quantitative Management and Computers and Industrial Engineering. He is the recipient of the IIE (Institute of Industrial Engineers) Fellow Award, ASME Fellow, Senior Fulbright Award and the 2011 Thomas Alva Edison Award for US Patent 7,115,089 B2.

Dr. **Mohsen A. Jafari** is a full professor of Industrial & Systems Engineering at Rutgers University. He has been with Rutgers University since 1987. He received his Ph.D. in Systems Engineering and Operations Research and M.S. in Computer Science from Syracuse University. His research areas of interest are in systems optimization & control, intelligent distributed systems, simulations, and data modeling in transportation, manufacturing and healthcare. He has directed or co-directed a total of over \$11.5M funding from various government agencies such as the NSF, DOE, ONR, DoD/DLA, FHWA, US/NJ Department of Transportation, NJ Department of Health and Senior Services. He has also been consultant to several fortune 500 companies as well as local and state government agencies.

Dr. **Myong K. (MK) Jeong** is an Associate Professor in the Department of Industrial and Systems Engineering and the Rutgers Center for Operations Research at Rutgers University. He received his BS in Industrial Engineering from Han Yang University, Seoul, Korea, in 1991, MS in Industrial Engineering from Korea Advanced Institute of Science and Technology, Taejon, Korea, in 1993, MS in Statistics from Georgia Institute of Technology, Atlanta, Georgia, in 2002, and Ph.D. in Industrial and Systems Engineering from Georgia Institute of Technology, Atlanta, Georgia, in 2004. He was

formerly an Assistant Professor in the Department of Industrial and Information Engineering, the University of Tennessee, Knoxville. He worked as a senior researcher from 1993 to 1999 at the Electronics and Telecommunications Research Institute (ETRI). His research interests include data mining, health monitoring, quality and reliability engineering, stochastic processes, and sensor data analysis. He received the Freund International Scholarship and the National Science Foundation (NSF) CAREER Award in 2002 and in 2007, respectively. His research has been funded by the NSF, United States Department of Agriculture (USDA), National Transportation Research Center, Inc. (NTRCI), and industry. He has been a consultant for Samsung Electronics, ETRI, and other companies. He is an associate editor of the IEEE Transactions on Automation Science and Engineering and International Journal of Quality, Statistics and Reliability, and Advisory Board Member of International Journal of Advanced Manufacturing Technology. He is a senior member of IEEE.

Assistant Professor **Kang Li** received his Bachelor of Science degree in Mechanical Engineering (Precision Instruments and Mechanology) from Tsinghua University, China, in 1999, and completed a Master of Science in Industrial Engineering from Mississippi State University in 2004. He received his Ph.D. in Mechanical and Industrial engineering from the University of Illinois at Urbana-Champaign in May 2009. His research interests are in the areas of orthopaedic biomechanics, rehabilitation engineering, occupational biomechanics, and human factors/ergonomics. He has been actively working with surgeons, medical students, residents, and fellows in the healthcare field for more than 4 years. He is currently an adjunct assistant professor in the Department of Orthopaedics at the University of Medicine and Dentistry in New Jersey (NJMS). His work has been funded by NIH NIAMS, Charles and Johanna Busch Memorial Fund, and Rutgers Faculty Research Grant. He is a finalist for the New Investigator Recognition Award (NIRA) by the Orthopaedic Research Society (2011) and a co-recipient of the 2011 O'Donoghue Sports Injury Research Award.

James T. Luxhoj is Professor of Industrial and Systems Engineering. Dr. Luxhoj received his Ph.D. in Industrial Engineering and Operations Research from Virginia Polytechnic Institute and State University in 1986. He was an ASEE/Office of Naval Research Distinguished Faculty Fellow at the U.S. Navy Air Systems Command at Patuxent River, MD and Lakehurst, NJ during the summer 2012. He was also an ASEE/NASA Langley Faculty Fellow during the summer of 1987. Dr. Luxhøj was a Visiting Professor at Aalborg University in Denmark from 1994-1995 and Fall 2001. His research interests include risk analysis, system safety and engineering economics. The Federal Aviation Administration, NASA and the U.S. Navy have supported Dr. Luxhøj's research in aviation safety risk analysis. He is a past Chairman and Director of the engineering economy divisions of the American Society for Engineering Education and the Institute of Industrial Engineers. Dr. Luxhoj was the recipient of a SAE Ralph R. Teetor Award for Engineering Education Excellence (1989), a Sigma Chi Outstanding Professor for Rutgers University Award (1991), the Rutgers University Parents' Association Teacher of the Year Awards for the College of Engineering (1988, 1997), and a five-time recipient of the Rutgers Engineering Governing Council's Excellence in Teaching Awards. An IIE Fellow, he currently serves as the IIE Faculty Advisor. Dr. Luxhoj is a former Department Editor for the *IIE Transactions on Operations Engineering*. He is a member of IIE, Tau Beta Pi, Alpha Pi Mu, and Sigma Xi and is the co-author of *Engineering Economy*, 13th ed. (Prentice-Hall, 2006).

Tuğrul Özel is Associate Professor and Director of Manufacturing & Automation Research Laboratory in the Department of Industrial and Systems Engineering at Rutgers. He received his Ph.D. degree in Mechanical Engineering from Ohio State University in 1998. Dr. Özel previously worked at NSF funded Engineering Research Center for Net Shape Manufacturing at Ohio State and taught at Cleveland State University. He was also a summer faculty fellow at NASA Glenn Research Center in 1999. His research interest includes sustainable manufacturing, computational modeling and optimization of manufacturing processes, physics-based process simulations, mechatronics, automation and control, micro/nano manufacturing systems. His research has been well funded by National Science Foundation, NASA/New Jersey Space Grant Consortium, Rutgers Research Council and automotive, aerospace, machine tool, and medical device industry. He is the Editor-in-Chief of the *International Journal of Mechatronics and Manufacturing Systems* and has been serving as editorial board member and guest editor for several international journals. He is the co-author of four edited books “Intelligent Machining”, (ISTE-Wiley, 2009), “Micro-Manufacturing: Design and Manufacturing of Micro-Products”, (Wiley, 2010); “Modern Manufacturing Processes”, (Wiley 2013); and “Biomedical Devices: Design, Prototyping, and Manufacturing”, (Wiley, 2013). He has published over 50 articles in engineering journals such as *ASME Journal of Manufacturing Science and Engineering*, *International Journal of Machine Tools and Manufacture*, *Journal of Materials Processing Technology*, *Materials and Manufacturing Processes*, and *International Journal of Advanced Manufacturing Technology* and authored nearly 50 conference publications. He has been member of scientific or program committee over 20 international conferences. Dr. Özel is active senior member of SME, ASME, North American Manufacturing Research Institute and associate member of CIRP- International Academy for Production Engineering. He is listed in The Marquis Who's Who in the World, Who's Who in America, and Who's Who in Science and Engineering.

Hoang Pham is Professor and Chairman in the Department of Industrial and Systems Engineering at Rutgers University. Before joining Rutgers, he was a Senior Engineering Specialist with the Idaho National Engineering Laboratory and Boeing Company. Dr. Pham received his Ph.D. from the State University of New York at Buffalo. His research areas include system reliability modeling, maintenance, and software reliability. Dr. Pham is the Editor-in-Chief of the *International Journal of Reliability, Quality and Safety Engineering* and an Associate Editor of the *IEEE Transactions on Systems, Man and Cybernetics*. He is also the Editor of *Springer Series in Reliability Engineering* and an editorial board member of several other journals including *IIE Transactions on Quality and Reliability Engineering*, and *International Journal of Systems and Science*. Dr. Pham is the author/coauthor of 5 books, edited 9 books and has published 120 journal articles. He is a fellow of IEEE and IIE.

Assistant Professor **Honggang Wang** received his BS in Power Engineering from Shanghai Jiao Tong University, Shanghai, China, in 1996, MS in Manufacturing Engineering from University of Missouri-Rolla, in 2004, and Ph.D. in Industrial Engineering from Purdue University, Indiana in 2009. He has worked as a Postdoc Scholar in Energy Resources Engineering at Stanford University for two years before he joined the department of Industrial and Systems Engineering at Rutgers in 2011. Dr. Wang's research and teaching interests lie in system uncertainty modeling and analysis, stochastic optimization, operations research, and their applications in energy production, supply chains, and manufacturing systems.

16. Graduate Courses in Industrial and Systems Engineering

16:540:510 Deterministic Models in Industrial Engineering (3) Deterministic models of operations research. Linear programming, the simplex method, duality, and dynamic programming. Prerequisite: 14:540:311 (undergraduate introduction to operations research).

16:540:515 Stochastic Models in Industrial Engineering (3) Stochastic models of operations research applied to queuing, reliability, inventory, supply chain, and other problems; Poisson processes; discrete-time and continuous-time Markov chains; renewal processes; transient and steady-state analyses. Prerequisite: Calculus-based course in probability.

16:540:520 Supply Chain and Logistics Engineering (3) Methods and techniques of operations research applied to the design and analysis of marketing and distribution systems. Topics include sales forecasting, single- and multiechelon inventory and distribution systems, routing and scheduling of product delivery. Prerequisites: Calculus, some knowledge of probability.

16:540:530 Forecasting and Time Series Analysis (3) Alternate linear and nonlinear, stationary and nonstationary time-series models for purposes of prediction. Smoothing techniques, estimating trend and seasonality, multivariate time series, and state-space models. Various estimation and forecasting techniques. Prerequisites: Statistics and 16:540:515, or permission of instructor.

16:540:535 Network Applications in Industrial and Systems Engineering (3) Flow problems in networks. Topics include shortest-route problems, critical path, and GERT. Prerequisite: 14:540:311 (undergraduate introduction to operations research).

16:540:540 Computational Methods for Industrial Engineering (3) Computational methods in modeling, planning, and control of production systems; numerical methods; artificial intelligence techniques; exact and heuristic search methods; and computational strategies for larger-scale systems. Prerequisites: Programming in C helpful but not required.

16:540:542 Enterprise Integration (3) Building and integrating information systems into manufacturing, engineering, and business functions in an enterprise. Methodological and practical aspects including client-server models, internet-based three-tiered system architecture, legacy systems, data transfer, and distributed computing. Project involves prototyping of small enterprise information systems from design to implementation. Prerequisite: 14:540:485.

16:540:550 Special Problems in Industrial Engineering (BA) Investigations in selected areas of industrial and systems engineering and operations research. Prerequisite: Permission of instructor.

16:540:552 Manufacturing Project (3) Understanding of the state of technology in discrete, batch, and continuous manufacturing; hands-on experience. Prerequisite: Permission of instructor.

16:540:555 Simulation of Production Systems (3) Discrete event simulation applied to problems in manufacturing, inventory control, and engineering economics. Topics include simulation languages, estimating production system operating characteristics, comparing alternative systems, and validating approximate analytical models. Prerequisites: Probability and computer programming.

16:540:560 Production Analysis (3) Analysis of production engineering, with emphasis on planning and control of manufacturing and service systems. Prerequisites: Probability and linear programming.

16:540:568 Automation and Computer-Integrated Manufacturing I (3) Design of automated and computer-integrated manufacturing systems using programmable automation. Modeling of discrete and continuous control systems, design and analysis of control architecture, implementation of programmable controllers, and shop floor data acquisition systems. Prerequisite: 14:540:382 or permission of instructor.

16:540:570 Applications of Robotics in Manufacturing Systems (3) Integration of robots in manufacturing systems, design of robot workstations, materials handling, and interactions among manufacturing cells. Economic feasibility and robot selection. Prerequisites: 14:540:343, 453, and undergraduate course in computer control is helpful but not required.

16:540:572 Manufacturing Processes and Control (3) Overview of manufacturing processes and computer numerically controlled machines, basic digital control theory, design and simulation of advanced controllers, tracking control in machine tools, precision engineering, sensors-based advanced monitoring of machine systems. Prerequisites: 14:540:303, 382, or permission of instructor.

16:540:573 Advanced Manufacturing Processes (3) Introduction to computational modeling and optimization of manufacturing processes. Modeling and optimization of precision manufacturing processes (micro-machining), advanced manufacturing processes (laser and energy beam based), additive manufacturing processes (selective laser sintering and melting). Emphasis on process physics and analytical and computational methods to predict and optimize process performance and product quality. Prerequisite: 14:540:303 or permission of instructor.

16:540:575 Advanced Engineering Economics I (3) Economic decision models for engineers involving allocation of resources; evaluation of strategic alternatives; advanced risk and uncertainty analysis; and weighing and evaluating nonmonetary factors. Prerequisite: 14:540:343.

16:540:580 Quality Management (3) Quality management philosophies, Deming, Juran; quality planning, control, and improvement; quality systems, management organizations for quality assurance. Role of operations research. Prerequisite: Permission of instructor.

16:540:585 System Reliability Engineering I (3) Methods of measuring the reliability and effectiveness of complex engineering systems, including optimization theory, preventive maintenance models, and statistical analysis. Prerequisites: 16:960:580 required; a course in stochastic modeling is helpful.

16:540:586 Maintenance Modeling and Optimization (3) Maintenance issues; technical foundations for modeling such large-scale systems; approaches for condition maintenance; and optimization methodologies for optimum inspection, repair, and maintenance schedules. Prerequisite: 16:540:585.

16:540:594 Risk Analysis and Mitigation (3) Concept of risk and probabilistic models for risk analysis. Expert judgment elicitation and incorporation into risk models. Causal chain, fault-tree, consequence analysis, risk management, and communication. Case studies in transportation, homeland security, health care systems, supply chain systems, and natural hazards. Prerequisites: Simulation and probability.

16:540:595 Software Reliability I (3) Software-reliability issues; software errors, faults, and failures; software design for reliability; data collection; formal methods for reliability; software fault tolerance; modeling growth in software reliability; cost modeling and estimation; and software quality management. Prerequisite: 16:540:515 or 16:960:580.

16:540:615 Advanced Stochastic Modeling in ISE (3) Stochastic modeling and control fundamentals of complex systems; renewal theory, Markov decision processes, martingales, and Brownian motion. Applications in reliability, transportation, telecommunication, and supply chains are emphasized

16:540:650 Discrete Event Dynamic Systems (3) Supervisory control of discrete event dynamic systems, process monitoring, Petri nets, functional analysis, performance analysis, control specification, and control verification and validation. Prerequisite: 16:540:515.

16:540:655 Performance Analysis of Manufacturing Systems (3) Modeling of manufacturing systems such as flow shops, job shops, transfer lines, and flexible manufacturing systems. Topics include problems of failures and repairs, the role of buffer inventories, capacity allocation, and machine interface problems. Prerequisite: 16:540:515.

16:540:660 Inventory Control (3) Modeling of supply chain and logistic systems with stochastic demand and lead times. Characterization of optimal control policies via stochastic dynamic programming, Markov decision processes, stochastic games and analysis of single as well as multi-item systems with single and multiple echelons, multiple retailers. Recent research issues are investigated. Prerequisite: 16:540:515.

16:540:665 Theory of Scheduling (3) Advanced topics in sequencing and scheduling for manufacturing and service systems; flow shop, job shop-static and dynamic models; multiprocessor parallel machining; preempt-resume algorithms; optimal due-date problems; probabilistic sequencing; simulation and applied operations research models. Prerequisites: Undergraduate production course and advanced calculus.

16:540:668 Automation and Computer-Integrated Manufacturing II (3) Design of automated and computer-integrated manufacturing systems using programmable automation. Modeling, specification, and implementation of factory information systems. Reference models and control architecture for discrete parts manufacturing, batch process manufacturing, and semiconductor manufacturing industries. Prerequisite: 14:540:486 or permission of instructor.

16:540:673 Laser-Based Micromanufacturing (3) Introduction to laser materials processing, micromanufacturing, and MEMS. Advances and opportunities made possible by application of laser-based micromanufacturing processes. Applications of laser micromachining, laser thin-film processing, laser microheat treatment, laser microwelding, and laser microrapid prototyping. Process modeling, planning, and integration issues. Prerequisite: 16:540:573.

16:540:675 Advanced Engineering Economics II (3) Focuses on engineering economic decision making. Application of analytical techniques to the evaluation of industrial projects, the relationship of project selection to long-range planning, and the relationship between the economics of technical choice and industrial productivity. Prerequisite: 16:540:575 or permission of instructor.

16:540:679 Optimization and Performance Models in Service Systems (3) Optimization and stochastic models for design and operation of service systems including health care and emergency services, security, warehousing, and call centers. Multiobjective optimization, location models, queueing systems, scheduling, resource allocation, workforce management. Prerequisites: Optimization (e.g., 16:540:510) and stochastic processes (e.g., 16:540:515).

16:540:680 Production and Quality Engineering (3) Doctoral seminar course employing journal articles in quality engineering, production systems, and topics relevant to the participating students including data mining, process control, energy, reliability, maintenance, security, sensor technology, and health care. Prerequisites: Open only to doctoral students in industrial and systems engineering, statistics, or operations research.

16:540:682 Process Modeling and Control (3) Linear stationary (ARMA) and nonstationary (ARIMA), nonlinear (ARCH, GARCH) time-series models for process control; Kalman filters; various automatic process control (APC) strategies; statistical process control (SPC) methods and integration of APC and SPC. Prerequisites: 16:540:515 and 568.

16:540:685 System Reliability Engineering II (3) Advanced topics in reliability theory and engineering; availability models of multistate devices; theory of preventive maintenance, replacement, and inspection; accelerated life reliability models. Prerequisite: 16:540:585.

16:540:690 Component Reliability (3) Emphasizes reliability estimation of components stressed under different conditions of thermal, electric field, humidity, vibration, and fatigue. Burn-in testing, reliability estimation from degradation data, and relationships between accelerated stresses and normal operating conditions. Prerequisite: 16:540:685.

16:540:691,692 Seminar in Industrial and Systems Engineering (0,0) Speakers from industry and academia describe their current research.

16:540:694 Advanced Topics in Industrial Engineering (3) Seminar for doctoral students in a selected area of industrial engineering. Based on current literature.
Prerequisite: Permission of instructor.

16:540:695 Software Reliability II (3)
Advanced topics in software reliability modeling, calibrating models, software-related problems, software-hardware reliability modeling, software cost models, optimum release policies, and fault-tolerant software modeling.
Prerequisite: 16:540:595 or permission of instructor.

16:540:701,702 Research in Industrial and Systems Engineering (BA,BA)

16.1 Other Courses of Interest

540:311 Deterministic Methods in OR

Prerequisite: none (linear algebra is helpful)

Elements of problem solving and algorithmic design. Use of numerical analysis and linear algebra to solve industrial engineering problems. Linear programming, optimization techniques.

540:343 Engineering Economics

Prerequisite: none

Economic decisions involving engineering alternatives; annual cost, present worth, rate of return, and benefit-to-cost; before and after tax replacement economy; organizational financing; break-even charts; unit and minimum-cost public sector studies.

540:485 Industrial Information Systems

Design of information systems for integrated manufacturing. Modeling, specification, and implementation of factory information systems. Relational database model and structured query language. Methods of automatic data acquisition and integration of factory floor information with factory host database for production planning and control.

540:486 Automated Manufacturing Systems

Prerequisite: 540:303 (Manufacturing Processes) and 540:382(Computer Control)

Introduction to computer-aided design and computer-aided manufacturing (CAD/CAM), numerical control, computer numerical controlled (CNC) machining, process planning and engineering, robotics hardware and programming, machine vision, data communications and local-area networks in manufacturing systems. (revised from catalog)

642:611 Mathematics Fundamentals for Industrial Engineering

Prerequisite: 2 Years of Calculus

The structure of mathematical modeling; topics in linear algebra; optimization of continuous and discrete functions; transforms; topics in differential and difference equations.

960:580 or 582 Introduction to the Methods and Theory of Probability

Prerequisite: one year of calculus

Emphasis on methods and problem solving. Topics include probability spaces, basic distributions, random variables, expectations, distribution functions, conditional probability and independence, sampling distributions.

960:590 Design of Experiments

Prerequisite: Probability and some knowledge of statistics

Fundamental principles of experimental design; completely randomized variance component designs, randomized blocks, Latin squares, incomplete blocks, partially hierarchic mixed model experiments, factorial experiments, fractional factorials, response surface exploration. (960:490 is suitable too)

17. Laboratories in the Department

Manufacturing Automation Laboratory: This laboratory is equipped with state-of-the-art equipment in CAD/CAM (Computer Aided Design and Computer Aided Manufacturing) and manufacturing automation systems. It includes production type CNC milling machines, a CNC lathe equipped with force dynamometers and an acoustic emission sensor, a mini-CNC laser-micro machining station, an innovative sheet folding machine, an impact testing machine, an automated storage and retrieval system, a material handling carousel and a robot assembly work station

Manufacturing Processing Laboratory: Basic machine tools such as turning, milling, drilling, grinding, welding and measuring machines are available to help the student become familiar with metal-processing operations. The equipment is also used to perform laboratory experiments in heat treatment, tool life and chip formation assessments.

Computer Laboratory: This lab is equipped with state-of-the-art PCs. The lab has the latest simulation software such as ARENA, Matlab/Simulink, and optimization software LINDO, GINO, etc. It has software for Quality Control, Plant Layout, Production Control, Statistical Analysis and text processing. It also has CAD/CAM/CAE software including AutoCAD, SolidWorks, ABAQUS and FeatureCAM. The laboratory is connected to a university-wide network and the internet.

Quality and Reliability Engineering Laboratory: This lab has been developed to allow the students to have hands on experience in actual methods for quality control and reliability engineering. A variety of software for control charts, sampling plans and design of experiments is available. The laboratory has a wide array of metrology equipment such as digital calipers and micrometers, a roundness measurement equipment, surface profilometers and a coordinate measuring machine. It also has various materials testing equipment, a Rockwell hardness tester temperature chambers, vibration test stands, and failure analysis equipment such as voltage stressing equipment, and measuring microscopes. LABVIEW and STATGRAPHICS software are available for students' use.

ISE Laboratory Technician: Mr. Joseph Lippencott, CORE 114
